## EXPERIENCE

### University of South Carolina

January 2022 – Current

Graduate Research Assistant | Machine Learning and Evolution Laboratory

Columbia, SC, United States

- **Research topic:** We use deep learning techniques to solve materials informatics problems (e.g., crystal structure prediction, materials property prediction) in our lab. My work on crystal structure prediction is similar to the protein structure prediction problem solved by AlphaFold2. I have also developed a state-of-the-art global attention-based Graph Neural Network architecture for the materials property prediction problem.
- **Concept / skills usage:** I mostly use Graph Neural Networks (GNNs) for my research. I have also used Convolutional Neural Networks, Transformers and Generative Models for my other researches. I am fluent in using PyTorch and PyTorch Geometric.

### University of South Carolina

August 2021 – December 2021, August 2023 – Current

Graduate Teaching Assistant | Course: CSCE102 (General Applications Programming)

Columbia, SC, United States

- Taught HTML, CSS, and JavaScript to a total of 72 students, and two lab group of total 50 students.

### Dohatec New Media

October 2019 – July 2021

Software Engineer

Dhaka, Bangladesh

- Worked as a Full Stack Software Engineer. Notable technologies used include React, Java Spring Boot, Hibernate, and MySQL.
